

Must-know

Ask Not What Your Boiler Can Do For You But How Many Heat Exchangers Has It Lost

Fulton is Rugged Robust and Reliable

Over the last 15 years, there have been many additions to the condensing boiler market. These products are from all over the United States and abroad. Every boiler is unique and different in its own way but the bottom line is everyone from the End Use, Engineer, Contractor and others expect the boiler to work and last without having expensive upgrades or maintenance throughout the life of that boiler.

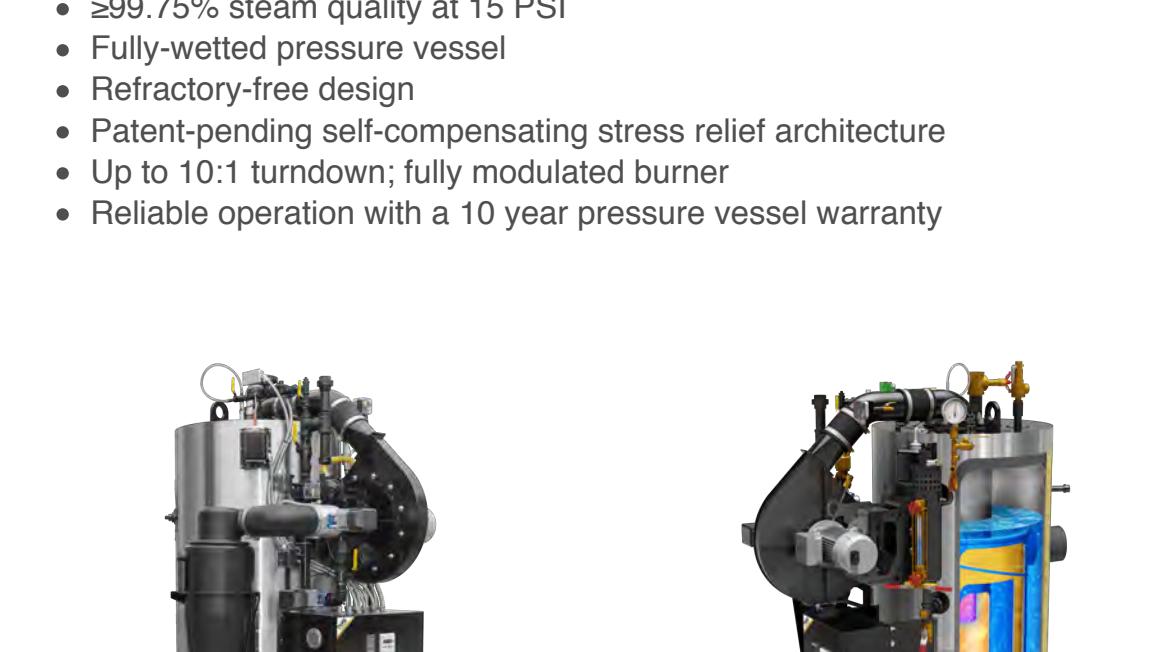

So then why use boilers where heat exchangers fail and create expensive upgrades when you could have used a boiler that doesn't have those added headaches and costs? The answer is simple:

USE FULTON

Ryan Company has been selling the Fulton Vantage for over 15 years and to this date we have not had a failed heat exchanger with the Fulton Vantage and don't expect to have any in the future. With the addition of the Fulton Endura and Endura + boiler that trend has continued without any failed heat exchangers. That is due to the Rugged, Robust, Reliable Design that Fulton produces. Fulton also stands behind this with the warranty that is offered which is a lifetime warranty on any Thermal Shock failure. No other boiler manufacturer offers that. Some other features that are key:

- Duplex Stainless steel heat exchanger ([Rolled Alloys](#) (www.rolledalloys.com) Bulletin No. 1101)
 - Duplex 2101 and 2205 is stronger and more corrosion resistant than conventional (300/400 series) stainless.
- Lifetime thermal Shock Warranty
- High Mass boiler
 - Dry weight of VTG-2000: 3,800 lbs; Typical competitor around 2,000 lbs
- High Volume
- Minimal yearly maintenance needed

Use Fulton and your Boiler room will be one less area to worry about in your future projects. If you chose to use another boiler manufacturer then you might end up with this scenario below. See below for a picture of changing out a failed heat exchanger from a different manufacturer. **The project was a High rise in a major downtown city. Roads were shut down and a special crane was rented to lift the heat exchanger into the building thru the roof. The heat exchanger that was replaced on the boiler was not even 1 year old.**

So again instead of just asking what are the features of the boilers. Lets have a discussion about failed heat exchangers in those boilers. Ask your reps and I think you would be surprised as to how many have this problem. Let us also ask What is the expected life of a high efficiency boiler? Ask us how to get the most out of your High Efficiency Boiler system? We are your boiler experts!!

Coming soon Ryan Cares program. Ryan Company's expanded warranty package. **Up to a 5 year parts and labor!** More details to follow

New Product Alert:

VSRT steam boiler Now available up to 250 HP

- Ultra-compact vertical design - industry's smallest footprint
- Up to 86% efficiency
- ≥99.75% steam quality at 15 PSI
- Fully-wetted pressure vessel
- Refractory-free design
- Patent-pending self-compensating stress relief architecture
- Up to 10:1 turndown; fully modulated burner
- Reliable operation with a 10 year pressure vessel warranty

[Ryan Company Inc] [3361 Republic Ave. St. Louis Park, MN] [952-915-6475]
